Global Purchasing Managers’ Index (PMI) for manufacturing

Source: Markit, J.P. Morgan Asset Management. The Global Purchasing Managers’ Index (PMI) assesses the economic health of the manufacturing sector by surveying output and employment intentions. A score of 50 indicates that economic activity is neither expanding nor contracting, above 50 indicates expansion. The colours range from red to yellow to green, where red is below 50, yellow is at 50 and green is above 50. Quarterly averages are shown, except the two most recent monthly data points. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe. Data as of 30 June 2019.

Global core inflation

Source: Bank of Japan, BLS, Eurostat, ONS, Refinitiv Datastream, J.P. Morgan Asset Management. CPI is the Consumer Price Index. Core inflation for the US is defined as CPI excluding food and energy. Core inflation for Japan is defined as CPI excluding fresh food and energy. Core inflation for the UK and the eurozone is defined as CPI less energy, food, alcohol and tobacco. Japan core CPI has been adjusted down by 2% from April 2014 to March 2015 to remove the estimated impact of the consumption tax hike over this period. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe.
Data as of 30 June 2019.
Global central bank policy

Market expectations for policy rate

Source: (Left) Bloomberg, J.P. Morgan Asset Management. Expectations are calculated using OIS forwards. (Right) Bank of England (BoE), Bank of Japan (BoJ), European Central Bank (ECB), Refinitiv Datastream, Swiss National Bank (SNB), US Federal Reserve (Fed), J.P. Morgan Asset Management. *Balance sheet forecast assumptions: BoE to have zero net asset purchases until the end of 2020; BoJ to have an annualised net asset purchase pace of 35 trillion yen until the end of 2020; ECB to have zero net asset purchases until the end of 2020; SNB to have zero net asset purchases until the end of 2020; Fed to reduce its balance sheet until the end of September 2019, in line with its announced plans. Assets then remain constant until reserves reach USD 1.2 trillion, at which point net asset purchases increase. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe. Data as of 30 June 2019.

US Federal Reserve: Balance sheet assets
USD trillions

Source: (All charts) Refinitiv Datastream, US Federal Reserve, J.P. Morgan Asset Management. Forecast: US Federal Reserve (Fed) balance sheet assets are projected to decrease until the end of September 2019, in line with the Fed’s announced plans. Reserves are subsequently expected to decline to a level of USD 1.2 trillion and then expected to be held constant, with overall liabilities growing in line with currency in circulation, which is expected to be 6.8% per annum (in line with the historical average). The asset side of the balance sheet will match in overall terms, but is expected to be progressively shifted from mortgage-backed securities to US Treasuries. Other assets and other liabilities are held constant over the forecast period. Past performance is not a reliable indicator of current and future results.

US debt

US debt to GDP ratios

Source: (All charts) Bank for International Settlements, Refinitiv Datastream, J.P. Morgan Asset Management. Debt refers to gross debt. For the household sector, gross disposable income is the amount of money that all of the individuals in the household sector have available for spending or saving after income distribution measures (for example, taxes, social contributions and benefits) have taken effect. For the non-financial corporate sector, gross disposable income is essentially akin to gross operating surplus before dividends or interest is paid. Periods of “recession” are defined using US National Bureau of Economic Research (NBER) business cycle dates. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe. Data as of 30 June 2019.

US effective import tariff rate

- **Proposed: 25% on global autos and auto part imports**
- **Proposed: 25% on remaining China imports**
- **Currently effective**

Source: (Left) Esteban Ortiz-Ospina and Max Roser "International Trade", US Census Bureau, US International Trade Commission, J.P. Morgan Asset Management. Currently effective and proposed data are JPMAM calculations. Currently effective tariffs include tariffs on washing machines, solar panels, steel and aluminium, as well as tariffs implemented on approximately USD 250 billion of China imports. Remaining China imports and global autos (including auto parts) are measures proposed on approximately USD 290 billion worth of goods for each. (Right) United Nations, US International Trade Commission, US Trade Representative, J.P. Morgan Asset Management. Analysis classifies each individual product that the US imports from China to the HTS-8 level that either appears on the 2018 & 2019 tariff lists published in the US Federal Register or has been threatened with higher tariffs into its appropriate System of National Accounts group and aggregates these categories by value of imports from 2017. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe. Data as of 30 June 2019.

Headline inflation target

Source: (All charts) Japan Ministry of Internal Affairs & Communications, Refinitiv Datastream, J.P. Morgan Asset Management. CPI is the Consumer Price Index. Core CPI is defined as CPI excluding fresh food. Core goods CPI is defined as goods CPI excluding fresh food. Increase in Japan inflation measures between 2014 and 2016 can be attributed to the impact of the consumption tax hike over this period. Past performance is not a reliable indicator of current and future results.

China debt to GDP ratios

- Non-financial corporates
- Government
- Households

Source: (Left) Bank for International Settlements, Refinitiv Datastream, J.P. Morgan Asset Management. Debt refers to gross debt. (Right) People’s Bank of China (PBoC), J.P. Morgan Asset Management. This chart includes three measures of credit ranging from the narrowest – RMB bank lending – to the more extensive broad credit. Specifically, RMB bank lending is the sum of all loans made by the commercial banking system to domestic borrowers. Total social financing (TSF) is all funding to domestic borrowers that is not explicitly backed by the sovereign and thus includes bank lending, trust loans, entrusted loans, bankers’ acceptances, corporate bonds and equity financing by non-financial enterprises, loan write-offs and local government ‘special’ bonds. Broad credit is total social financing plus all finance provided by local and central governments. Past performance is not a reliable indicator of current and future results.

**Global economy**

Source: (Left) Ministry of Finance of China, J.P. Morgan Securities Research, J.P. Morgan Asset Management. Central government spending is the incremental expenditure by the central government on infrastructure construction and subsidies to certain economic sectors. The spending is financed by tax revenue and issuance of treasury bonds. Local government spending is mostly composed of infrastructure investment conducted by local governments and their financing vehicles. These investments are mainly financed by bank loans, issuance of special local government bonds, policy bank loans and Private Public Partnership (PPP) projects.

Tax cuts include cuts to VAT, personal income tax, corporate taxes and tariffs. (Right) China Customs, People’s Bank of China (PBoC), Refinitiv Datastream, J.P. Morgan Asset Management. Broad credit impulse is the rate of change (using absolute 12-month changes) of annual broad credit as a % of GDP. Past performance is not a reliable indicator of current and future results. *Guide to the Markets - Europe.* Data as of 30 June 2019.

### Source

- FactSet, Russell Investment Group, Standard & Poor’s, J.P. Morgan Asset Management. All calculations are cumulative total return in USD, not annualised, including dividends for the stated period. *Communication Services (formerly Telecom) averages are based on five years of backtested data by JPMAM. **Since market peak" represents period 9 October 2007 to end of last quarter. ***Since market low" represents period 9 March 2009 to end of last quarter. Forward P/E ratio is a bottom-up calculation based on the most recent S&P 500 Index price, divided by consensus estimates for earnings in the next 12 months (NTM), and is provided by FactSet Market Aggregates. Trailing P/E ratios are bottom-up values defined as month-end price divided by the last 12 months of available reported earnings from brokers. Dividend yield is calculated as the next 12-month consensus dividend divided by most recent price. Averages are since 1996 due to data availability. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe. Data as of 30 June 2019.

Source: MSCI, Refinitiv Datastream, J.P. Morgan Asset Management. Both MSCI ACWI and MSCI ACWI ESG Leaders are in USD, rebased to 100 at the inception of the ESG Leaders index. MSCI ACWI ESG Leaders is a capitalisation-weighted price index that provides exposure to companies with high Environmental, Social and Governance (ESG) rankings relative to their sector peers and excludes companies with involvement in alcohol, gambling, tobacco, nuclear power and weapons. ESG rankings are given to companies based on the MSCI framework. The MSCI ESG Leaders index aims to target the sector weights of the underlying indices to limit systematic risk introduced by the ESG selection process. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe. Data as of 30 June 2019.
Past and expected returns
%
annualised return

Source: 2019 Long-Term Capital Market Assumptions. November 2018, J.P. Morgan Multi-Asset Solutions, J.P. Morgan Asset Management. Returns are nominal and in euros. Past returns are calculated from the start of 2009 up to 3Q 2018, or the most recent available data. The projections in the chart above are based on J.P. Morgan Asset Management’s proprietary long-term capital market assumptions (10-15 years) for returns of major asset classes. The resulting projections include only the benchmark return associated with the portfolio and do not include alpha from the underlying product strategies within each asset class. The assumptions are presented for illustrative purposes only. Past performance is not a reliable indicator of current and future results. Guide to the Markets - Europe.

All indexes are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.

The S&P 500® Index is widely regarded as the best single gauge of the U.S. equities market. This world-renowned index includes a representative sample of 500 leading companies in leading industries of the U.S. economy. Although the S&P 500® Index focuses on the large-cap segment of the market, with approximately 75% coverage of U.S. equities, it is also an ideal proxy for the total market. An investor cannot invest directly in an index.

The S&P 400 Mid Cap Index® is representative of 400 stocks in the mid-range sector of the domestic stock market, representing all major industries.

The Russell 3000® Index® measures the performance of the 3,000 largest U.S. companies based on total market capitalization.

The Russell 1000® Index® measures the performance of the 1,000 largest companies in the Russell 3000.

The Russell 1000 Growth Index® measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

The Russell 1000 Value Index® measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

The Russell Midcap® Index measures the performance of the 800 smallest companies in the Russell 1000 Index.

The Russell Midcap Growth Index® measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values. The stocks are also members of the Russell 1000 Value Index.

The Russell Midcap Value Index® measures the performance of those Russell Midcap companies with lower price-to-book ratios and lower forecasted growth values. The stocks are also members of the Russell 1000 Value Index.

The Russell 2000® Index® measures the performance of the 2,000 smallest companies in the Russell 3000 Index.

The Russell 2000 Growth Index® measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

The Russell Top 2000® Index® measures the performance of the largest cap segment of the U.S. equity universe. It includes approximately 250 of the largest securities based on a combination of their market cap and current index membership and represents approximately 68% of the U.S. market.

The MSCI® EA FE (Europe, Australia, Far East) Net Index is recognized as the pre-eminent benchmark in the United States to measure international equity performance. It comprises 21 MSCI country indexes, representing the developed markets outside of North America.

The MSCI Emerging Markets Index® is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. As of June 2007, the MSCI Emerging Markets Index consisted of the following 25 emerging market country indices: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Jordan, Korea, Malaysia, Mexico, Morocco, Pakistan, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey.

The MSCI ACWI (All Country World Index)® Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. As of June 2009 the MSCI ACWI consisted of 45 country indices comprising 23 developed and 22 emerging market country indices.

The MSCI Small Cap Indices® target 40% of the eligible Small Cap universe within each industry group, within each country. MSCI defines the Small Cap universe as all listed securities that have a market capitalization in the range of USD200-1,500 million.

The MSCI® Country Asia Pacific ex-Japan Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the developed and emerging markets in the Pacific region. The MSCI All Country Asia Pacific ex-Japan Index consists of the following 11 developed and emerging market countries: Australia, China, Hong Kong, Indonesia, Japan, Korea, Malaysia, New Zealand, Philippines, Singapore, Taiwan, and Thailand.

The MSCI China Index is an unmanaged index considered representative of stocks of China.

The MSCI KOKUSAI Index is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets excluding Japan. The MSCI KOKUSAI Index consists of the following 23 developed market country indices: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Israel, Italy, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom, and the United States.

The Nikkei 225® Index is a price-weighted average of the 225 top-rated Japanese companies listed in the first section of the Tokyo Stock Exchange.

The Tokyo Price Index (TOPIX) is a capitalization-weighted index lists all firms that are considered to be under the ‘first section’ on the TSE, which groups all of the large firms on the exchange into one pool. The second section groups all of the remaining smaller firms.

The FTSE 100 Index is an index of the 100 largest companies (by market capitalization) in the United Kingdom.

The FTSE 10 Share Index is an index of the 630 largest companies (by market capitalization) in the United Kingdom.

The MSCI Value and Growth Indices® cover the full range of developed, emerging and All Country MSCI Equity indexes. As of the close of May 30, 2003, MSCI implemented an enhanced methodology for the MSCI Global Value and Growth Indices, adopting a two dimensional framework for style segmentation in which value and growth securities are categorized using different attributes - three for value and five for growth including forward-looking variables. The objective of the index design is to divide constituents of an underlying MSCI Standard Country Index into a value index and a growth index, each targeting 50% of the free float adjusted market capitalization of the underlying country index. Value/Growth indices are then aggregated into regional Value/Growth indices. Prior to May 30, 2003, the indices used Price/Book Value (P/BV) ratios to divide the standard MSCI country indices into value and growth indices. All securities were classified as either "value" securities (low P/BV securities) or "growth" securities (high P/BV securities), relative to each MSCI country index.

The following MSCI Total Return Indices® are calculated with gross dividends:

This series approximates the maximum possible dividend reinvestment. The amount reinvested is the dividend distributed to individuals resident in the country of the company, but does not include tax credits.

The MSCI Europe Index® is a free float-adjusted market capitalization index that is designed to measure developed market equity performance in Europe. As of June 2007, the MSCI Europe Index consisted of the following 16 developed market country indices: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

The MSCI Pacific Index® is a free float-adjusted market capitalization index that is designed to measure equity market performance in the Pacific region. As of June 2007, the MSCI Pacific Index consisted of the following 5 Developed market country markets: Australia, Hong Kong, Japan, New Zealand, and Singapore.

Credit Suisse/Tremont Hedge Fund Index® is compiled by Credit Suisse Tremont Index, LLC. It is an asset-weighted hedge fund index and includes only funds, as opposed to separate accounts. The Index uses the Credit Suisse/Tremont database, which tracks over 4,500 funds, and consists only of funds with a minimum of US$50 million under management, a 12-month track record, and audited financial statements. It is calculated and rebalanced on a monthly basis, and shown net of all performance fees and expenses. It is the exclusive property of Credit Suisse Tremont Index, LLC.

The NCREIF Property Index® is a quarterly time series composite total rate of return measure of investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only. All properties in the NPI have been acquired, at least in part, on behalf of tax-exempt institutional investors - the great majority being pension funds. As such, all properties are held in a fiduciary environment.

The NAREIT EQUITY REIT Index® is designed to provide the most comprehensive assessment of overall industry performance, and includes all tax-qualified real estate investment trusts (REITs) that are listed on the NYSE, the American Stock Exchange or the NASDAQ National Market List.
The Dow Jones Industrial Average measures the stock performance of 30 leading blue-chip U.S. companies.

The Dow Jones-UBS Commodity Index is composed of futures contracts on physical commodities and represents twenty two separate commodities traded on U.S. exchanges, with the exception of aluminum, nickel, and zinc.

West Texas Intermediate (WTI) is underlying commodity in the New York Mercantile Exchange's oil futures contracts.

The S&P GSCI Index is a composite index of commodity sector returns representing an unleveraged, long-only investment in commodity futures that is broadly diversified across the spectrum of commodities. The returns are calculated on a fully collateralized basis with full reinvestment.

The Bloomberg Barclays U.S. Aggregate Index represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities.

The Bloomberg Barclays U.S. Aggregate Index consists of funds that allocate capital based on perceived opportunities among several hedge fund strategies. Strategies adopted in a multi-strategy fund may include, but are not limited to, convertible bond arbitrage, equity long/short, statistical arbitrage and merger arbitrage.

The Bloomberg Barclays U.S. Dollar Floating Rate Note (FRN) Index provides a measure of the U.S. dollar denominated floating rate note market.

The Bloomberg Barclays U.S. Aggregate Index measures the U.S. dollar denominated floating rate note market. *Market Neutral returns for November 2008 are estimates by J.P. Morgan Funds Market Strategy, and are based on a scenario that assumes no responsibility for these estimates.

The Office of National Statistics (ONS) Index is a mix-adjusted average housing price index. The index is calculated monthly using mortgage financed transactions from the Regulated Mortgage Survey by the Council of Mortgage Lenders.

The J.P. Morgan Asset Management: Index definitions is a comprehensive global local emerging markets index, and consists of liquid, fixed-rate, domestic currency government bonds.

The Bloomberg Barclays Global Aggregate Corporate Index consists of corporate issues in Europe, the US and Asian-Pacific regions.

The Bloomberg Barclays Global High Yield Index is an unmanaged index considered representative of fixed rate, non-investment-grade debt of companies in the U.S., developed markets and emerging markets.

The Bloomberg Barclays Emerging Markets Index includes USD-denominated debt from emerging markets in the following regions: Americas, Europe, Middle East, Africa, and Asia. As with other fixed income benchmarks provided by Barclays Capital, the index is rules-based, which allows for an unbiased view of the marketplace and easy replicability.

The Bloomberg Barclays Euro-Aggregate Index is a mix-adjusted average housing price index. The index is calculated monthly using mortgage financed transactions from the Regulated Mortgage Survey by the Council of Mortgage Lenders.

The S&P GSCI Index is composed of futures contracts on physical commodities and represents twenty two separate commodities traded on U.S. exchanges, with the exception of aluminum, nickel, and zinc.

The Euro Stoxx 600 Index represents large, mid and small capitalisation companies across 18 European countries.

The JPMorgan GBI-EM Global Diversified Index includes U.S. dollar denominated Brady bonds, Eurobonds, traded loans and local market debt instruments issued by sovereign and quasi-sovereign entities.

The JPMorgan CEMBI Index is a USD denominated external debt index tracking bond issued by sovereigns and quasi-sovereigns in the developing nations.

The JPMorgan Corporate Emerging Markets Bond Index (CEMBI): The CEMBI tracks total returns of US dollar-denominated debt instruments issued by corporate entities in Emerging Markets countries, and consists of an investable universe of corporate bonds. Both indices are also available in Diversified version.

The JPMorgan Corporate Emerging Markets Bond Index (CEMBI) is designed to mirror the investable universe of the U.S. dollar denominated corporate bond market.
The Market Insights program provides comprehensive data and commentary on global markets without reference to products.
